Alpha FP

The only way to clean tank interiors while polishing the fuel — in the field!

- **Powerful rotary jets blast away contaminants and break up dirt and sludge.**
- **Cleans 100% of the interior.**
- **Easy to use.**
- **Cleans tanks up to 1,250 gallons.**
- **Cleans in less time, with less fluid.**
- **Field tested and proven.**

The Gamajet Alpha FP is the only way to clean tanks under 1200 gallons in size while you polish the fuel. Whether above or below ground, you can now thoroughly clean the tanks during the fuel polishing process and eliminate the possibility of recontaminating the fuel with leftover debris.

The AlphaFP easily fits inside the fuel storage tank where its powerful rotary jets blast away contaminants and break up dirt and sludge that is removed during polishing. Cleaning pressures range from 50-60 psi and flow rates average 20 gpm. The Gamajet is the only machine with enough power to clean 100% of the interior, yet small enough to fit in the fuel tank. As the world's leading supplier of rotary

impingement cleaning machines, Gamajet Cleaning Systems has been solving cleaning problems for over 50 years.

Responding to the needs of the agricultural and fuel storage markets, we are the only source to provide you with the capability of cleaning your fuel tanks while you clean the fuel — in the field!

Gamajet is a proud member of PEI. Providing tank cleaning solutions to the petroleum industry for decades.
